

NetShelter Vertical Cable Organizer—AR8440A, AR8441A

Inventory

M8 × 16mm hex head cap screw (12)

M8 hex nut (12)

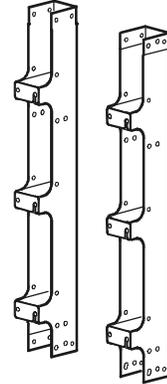

M8 flat washer (12)

M8 lock washer (12)

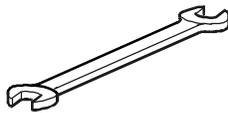

Edge grommet (25.5 inches)

Upper and lower vertical cable organizer (1 each)

Tools Required

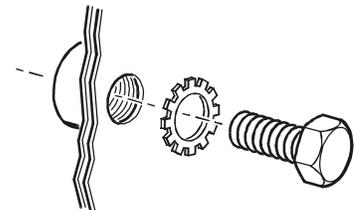

13mm wrench or socket wrench

Overview

The vertical cable organizer can be installed on all APC 4-post and 2-post racks. On all racks, the installation procedures are the same with the exception of the number and type of fasteners used.

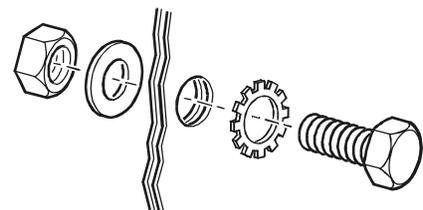

Number of fasteners required for 4-post racks (**AR203**, and **AR204**):

- Eight M8 × 16mm hex head cap screws
- Eight M8 lock washers

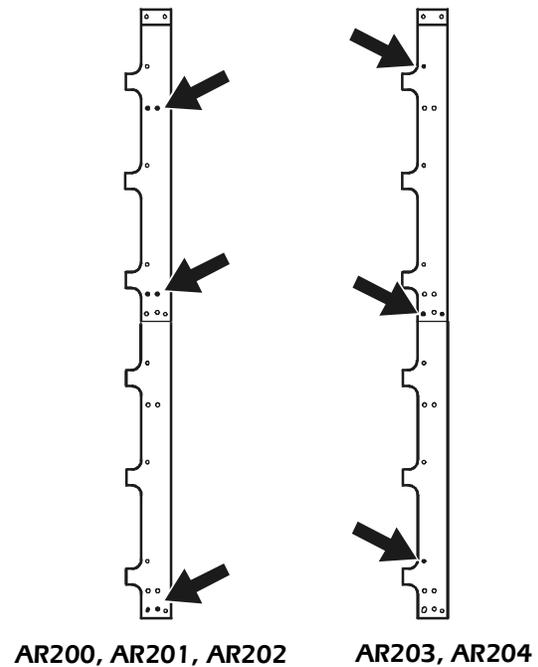

Number of fasteners required for 2-post racks (**AR200**, and **AR201**), and 4-post rack (**AR202**):

- 12 M8 × 16mm hex head cap screws
- 12 M8 lock washers
- 12 M8 flat washer
- 12 M8 hex nut

Hole patterns

The vertical cable organizer has two types of mounting hole configurations. The type of rack the vertical cable organizer is installed on will determine which one you will use. Refer to the hole alignment diagram to choose the correct hole configuration.

Installation

1. Position the upper vertical cable organizer against the rack's post and align the mounting holes.
2. Insert the appropriate fastener into one of the upper holes to hold the organizer in position.
3. Insert the lower cable organizer into the upper cable organizer and align the holes with the hole in the rack.
4. Insert the fasteners in the remaining mounting holes.
5. Measure, cut, and apply the edge grommet material to the edge of the vertical cable organizer where the upper and lower halves come together.
